AGRICULTURAL INNOVATION *BY* **SPEED GROUP**

FLEXIBLE STALLS

*Innovation for the well-being
of your dairy cattle*

SpeedFlex

A new generation of stalls

SPEED North America has a complete offering of flexible stalls, adaptable to any farm and to any herd size. Thanks to our know-how and our technology, we manufacture our stalls in many sizes, shapes and colors, adaptable for single or double rows.

Neck Cable

Stall

Attachment systems

Protect your herd

SpeedFlex is the result of many years of research and development. The full-sized stalls ensure maximum comfort and safety for the animals.

The unique structure of our stalls offers a unique compromise between rigidity and flexibility.

Core

Flexibility,
shape memory

Outer Skin

Rigidity, stability

Speed North America aims for a continuous improvement of performance and quality, without compromising strength. Our new products are tested on farms throughout the world.

Why Speedflex

- Supple enough to provide maximum comfort
- Rigid enough to keep the animal in the stall

When cattle are less stressed

+

has fewer injuries

+

remain lying down for longer periods

=

they produce more!

Your cattle lie down easily, allowing them to feel better

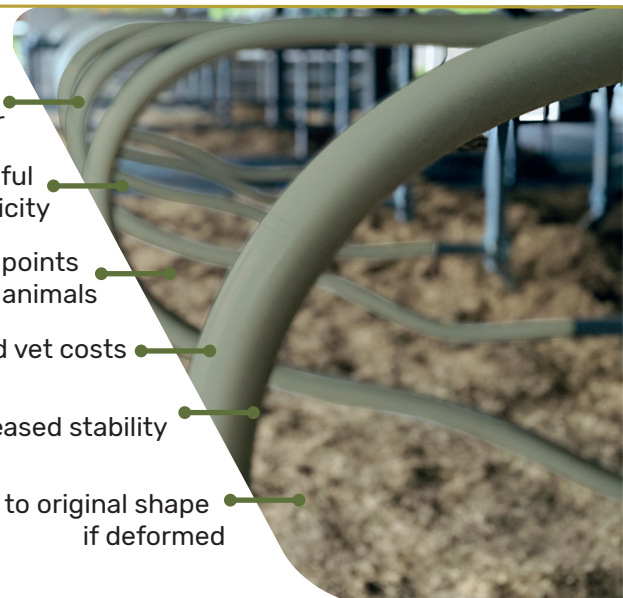

More comfort, no harmful static electricity

No pressure points on the animals

Reduces injuries and vet costs

Full sized for increased stability

Quickly returns to original shape if deformed

The *SpeedFlex* neck cable

This cable molds itself to the shape of the cow's neck, avoiding injuries when standing up.

The SpeedFlex neck cable works perfectly with existing steel stalls.

This again improves the cow's comfort and reduces their stress levels.

Speedflex for feeding areas

The neck cable can be used for easy feeding access. Its flexibility reduces injuries and stress in busy areas.

When a platform is installed in conjunction with a neck cable, manure scraping can be easily accomplished and the barn is cleaner. The SpeedFlex neck cable at the trough reduces competition for food access.

A cleaner barn

Cattle that are less stressed

Better access to food

Increased production!

Flexible stalls, with unique design

CUTTING-EDGE PRODUCTION PROCESS

SpeedFlex stalls are manufactured according to exacting specifications defined by our R&D department. We use modern production processes during manufacturing.

SPEED'S QUALITY COMMITMENT

From the selection of the raw materials to the post-production quality test, every step is taken with the greatest of care, the entire company is engaged to ensure the highest quality. Speed North America quality checks the individual product during and after production to ensure that each and every one meets our rigorous standards.

INDUSTRIAL TRACEABILITY

Each stall has a unique serial number. Traceability from production to end user is guaranteed.

Each SpeedFlex stall is covered by the Speed North America warranty.

About Speed Group

With plants in France, Chile and the United States, we are the world leader in monofilament extrusion for trimmer line. We have more than 40 years of expertise in extrusion and manufacturing on a global scale.

In 2020, the Speed Group integrated flexible stall manufacturing into its portfolio.

The Speed Group is motivated to earn your business with our quality products and dedicated team.
